

FRESHMAN CONSULTING · HERO FILM

«Раньше / Теперь»

(Before / Now)

SHOOTING SCRIPT — 30 SECONDS

Version 2.1 · based on the researched plan of 2026-07-02, PwC “So you can”
(2026) structure

Duration 30.0 s · 25 fps · master 4K → delivery 1080p H.264 · target file ≤ 7 MB

Voiceover: Russian · Subtitles: RU / EN / UZ (WebVTT, rendered by the site,
never burned in)

Placement: full-viewport hero of freshman-consulting landing · autoplays MUTED
· loops

Ground rules — read before the shoot

The muted cut is the film. Between 69% and 85% of visitors will never press unmute. Every scene below is written so the story reads with the sound OFF: the pictures alone must say “chaos → the same place, now calm → the person who did it.” The Russian voiceover is a bonus layer that plays only when a visitor taps the sound button. If a scene only makes sense with the voiceover, the scene is wrong.

Nothing is written into the picture. No words, no labels, no title cards inside the video — the site serves three languages and burned-in text would freeze one of them. Anything readable on props (posters, signage, whiteboards) must be avoided or out of focus. All words live in the HTML overlay and the VTT subtitles.

Center-punch every shot. On a phone the site crops the video to roughly the middle third of the frame (object-cover, ~26–33% of the width survives). The subject and the key action sit in the central vertical band of the 16:9 frame — check every setup against the iPhone 9:16 grid before rolling. The bottom ~25% and the top ~12% of the frame stay visually calm: the site's headline (bottom-left), sound button (bottom-right), scroll cue (bottom-center) and navbar (top) are overlaid there by CSS.

The before/after match-cuts are the concept. Scenes 2 and 3 repeat the exact same framings. Tape the tripod feet, note the head height, lock focus and exposure. If the “after” frame drifts even slightly, the match-cut magic dies.

Numbers are forbidden. No statistics, no percentages, no client counters in the picture or the voiceover. The film makes the visitor *feel* the losses; the statistics section directly under the video delivers the proof. The only number allowed on screen is the diegetic missed-call badge on the phone.

The look is documentary, not advertising. Natural bright light, real places, real papers, real screens. The post-2024 market punishes gloss — luxury signifiers and “guru” aesthetics pattern-match to fraud for this audience. The polish lives in one place only: the red VFX layer.

The VFX layer is the brand. Every composited graphic — UI cards, calendar fills, leak circles, checkmarks — is drawn in Freshman red **#E5484D**, the site's accent color. The RGB light on the founder set is dialed to the same red so the accent also exists in-camera. VFX is an accent, never a curtain: if a beat works without a graphic, it ships without a graphic.

TECHNICAL SETUP, EVERY SHOT

Locked tripod · 4K · 25 fps · shutter 1/50 (Uzbekistan mains is 50 Hz — any other shutter risks flicker under practical lights) · manual exposure and white balance, locked · after every good take, shoot a CLEAN PLATE (same framing, subject steps out, 5 s) and keep 2–3 s handles on both ends for the edit and for tracked VFX.

The film, scene by scene

SCENE 1 · 0:00.0 – 0:03.0 · 3.0 s

The missed call

LOCATION / SETUP

Any real business counter, styled neutral — a café bar, a retail counter, or Bilol's barbershop counter framed so the industry is NOT identifiable (no clipper, no chair, no mirror in frame). On the counter: a smartphone lying face-up, slightly left of true center; behind it, at f/1.8-style shallow depth, a person's hands working at something — wrapping, typing, pouring — motion-blurred, anonymous.

WHAT THE VIEWER SEES

We open MID-ACTION — no fade-in, no logo, frame one is already alive. The phone screen lights up: an incoming call. It rings, unanswered, while the busy hands keep working behind it. The call dies. The missed-call notification badge ticks from 7 to 8. One breath on that number.

CAMERA & LIGHTING

Locked tripod, slight high angle (~20°) looking down at the counter so the phone screen is fully readable. The phone occupies the central third. Natural window light as key; no extra units needed if the location is bright. Expose for the phone screen — it must not blow out.

VFX (POST)

Subtle red (#E5484D) glow-pulse traced around the missed-call badge at the moment it ticks to 8 — one pulse, small, diegetic. Nothing else. This is the only number that will ever appear in the film.

SOUND (UNMUTE LAYER)

Room tone. One muted phone buzz. The voiceover enters only after the badge ticks — silence first, one breath of it.

VOICEOVER — ENTERS AT ~0:01.5

«Раньше рутина была просто частью бизнеса.»

TRANSLATIONS (FOR VTT SUBTITLES)

EN: "Routine used to just be part of running a business." · UZ: "Ilgari yumushlar biznesning oddiy bir qismi edi."

DELIVERY NOTE

Calm, matter-of-fact, almost nostalgic. No sales energy anywhere in this script — the voice of someone stating an obvious thing.

WHY THIS SHOT OPENS THE FILM

The first 3 seconds carry up to 47% of a video's brand value (Nielsen). A ringing phone nobody can answer is the fastest-decoding image of "this business is leaking money" — every owner has lived it.

SCENE 2 · 0:03.0 – 0:09.0 · 6.0 s (three shots, ~2 s each)

Before — the chaos

WHAT THIS SCENE DOES

Three fast cuts, three universal archetypes of manual chaos. No single industry is the hero — a visitor from ANY business must recognize at least one of these as their own Tuesday. Cut rhythm is quick

(three scene-changes inside six seconds keeps early retention).

SHOT 2A — THE PAPER LEDGER (~2 S)

Top-down or 45° close-up: a worn paper appointment book / order ledger. Names and times crossed out, rewritten, arrows, a coffee ring. A hand with a pen taps, hesitates, crosses out another line. The handwriting must be real but NOT readable as words at final resolution — squiggle-real, language-neutral.

SHOT 2B — THE STICKY-NOTE WALL (~2 S)

A wall or monitor edge crowded with sticky notes — tasks, phone numbers, reminders. Mid-shot, centered. As we watch, ONE note loses grip and falls. Practical effect, no VFX: just weak glue and patience. The fall is the punchline — a task literally slipping away.

SHOT 2C — THE DROWNING SCREEN (~2 S)

Over-the-shoulder of an anonymous operator: a chat queue (Telegram-like) piling up faster than fingers answer — three new message bubbles land during the shot — while a spreadsheet scrolls endlessly in a second window. Clock in the corner of the room (not the screen) reads late evening. Screens are REAL UI shot in-camera, far enough that no individual word is legible; ALSO record this screen as a raw screen-capture and shoot a blank-screen clean plate so post can rebuild it per-language if ever needed.

CAMERA & LIGHTING

All three locked tripod, subjects center-punched. 2A/2B bright natural light; 2C slightly dimmer, screen-lit face edge — the only “evening” shot in the film.

VFX (POST)

Thin red (#E5484D) hairline circles/underlines flag the leak in each shot for 8–10 frames — the crossed-out line in 2A, the falling note in 2B, the unanswered bubble count in 2C. Hand-drawn feel, no words, surgical and quick.

SOUND (UNMUTE LAYER)

Pen scratches, paper rustle, message pings stacking — sounds slightly too frequent, engineered unease.

VOICEOVER — 0:03.5 → 0:08.5

«Теперь её можно снять с плеч. Мы находим, где ваши процессы теряют время и деньги.»

TRANSLATIONS

EN: “Now you can take it off your shoulders. We find where your processes lose time and money.” ·

UZ: “Endi uni yelkangizdan olib tashlash mumkin. Jarayonlaringiz qayerda vaqt va pul yo'qotayotganini topamiz.”

DELIVERY NOTE

The first sentence is the turn — a half-step brighter than Scene 1. The second sentence lands flat and confident, like a diagnosis.

SCENE 3 · 0:09.0 – 0:17.0 · 8.0 s (three mirrored shots)

Now — the same frames, calm

WHAT THIS SCENE DOES

The heart of the concept: the EXACT same three framings from Scenes 1–2, re-shot with the chaos resolved. The viewer's brain does the before/after comparison instantly and involuntarily — but only if the framings are pixel-close. Tape the tripod marks. Same lens, same height, same exposure, same time of day.

SHOT 3A — THE COUNTER, QUIET (~3 S)

The Scene-1 counter framing. The phone lies dark and untouched. On a tablet or laptop edge beside it, a Telegram booking confirmation slides in silently — a real bot conversation, shot far enough to read as “a system confirming” rather than legible text. The hands in the background are now visible doing the actual work, unhurried. Nobody touches the phone.

SHOT 3B — THE WALL, CLEARED (~2.5 S)

The Scene-2B wall framing: the sticky notes are gone. In their place, a single screen shows one tidy dashboard. VFX assist: the last three sticky notes lift off the wall and fold themselves into a red (#E5484D) UI card that docks into the dashboard — the film's one moment of open visual magic, the PwC glass-table move.

SHOT 3C — THE DESK, EMPTY CHAIR (~2.5 S)

The Scene-2C desk framing: the chat queue shows every thread answered (calm, no new bubbles); a calendar grid fills itself slot by slot (red VFX fills, no words, just blocks appearing in rhythm). The operator's chair is EMPTY — pushed back, jacket gone. The system works; the human went home. Evening light replaced by morning light: time has moved on and nothing broke.

VFX (POST)

All graphics in #E5484D on real surfaces: the folding sticky-note card (3B), the self-filling calendar (3C), soft checkmarks resolving over the answered chat queue. Motion is calm and physical — things settle, they do not fly.

SOUND (UNMUTE LAYER)

The pings stop. Room tone opens up. Two soft UI ticks as the checkmarks land; one warm low pad rises under the scene — the sonic exhale.

VOICEOVER — 0:09.5 → 0:16.0

«И строим системы, которые закрывают утечки: автоматизация, интеграции, AI — там, где он окупается.»

TRANSLATIONS

EN: “And we build systems that close the leaks: automation, integrations, AI — where it pays for itself.” · UZ: “Va yo'qotishlarni to'xtatadigan tizimlar quramiz: avtomatlashtirish, integratsiyalar, AI — o'zini oqlaydigan joyda.”

DELIVERY NOTE

Verb-led, even rhythm on «автоматизация, интеграции, AI» — three beats, tiny pause before «там, где он окупается» so the honesty of that qualifier registers.

SCENE 4 · 0:17.0 – 0:24.0 · 7.0 s (two shots)

The builder

WHAT THIS SCENE DOES

Only now — after the work has spoken — does a person appear. Work-before-face is deliberate: the chaos and the running systems pre-earn credibility before a young founder enters the frame. The founder never talks on camera (muted talking lips read as broken video); he is seen building.

SHOT 4A — FOUNDER AT WORK (~4 S)

Medium shot, founder at his desk on the backdrop set, centered. Eyes on the SCREEN, not the lens — gaze-cueing research says the viewer's attention follows his gaze to the work. He types, checks, nods slightly — real work energy, not posing. Lighting: COB + softbox as key at 45°, just above eye level; white-wall bounce as fill from the opposite side; the RGB accent light dialed to **#E5484D** as a rim from behind — a thin red edge separating him from the backdrop. The brand color exists in-camera.

SHOT 4B — OVER THE SHOULDER, THE PROOF (~3 S)

Over-the-shoulder: his screen runs the REAL systems — a quick beat of the booking bot conversation flow, a quick beat of the exam-grading pipeline. Two products, ~1.5 s each. Far enough that the UI reads as “real running software,” close enough to feel authentic. Record both flows separately as raw screen captures (QuickTime, native resolution) and shoot a blank-screen clean plate of this framing — post will decide final screen content and can localize it.

VFX (POST)

Two or three red UI cards drift gently OFF his screen and hover a beat before dissolving — data leaving the screen and becoming real. Language-neutral: icons, checkmarks, a tiny calendar. Restraint: this must feel like seasoning, not a hologram show.

SOUND (UNMUTE LAYER)

Soft keyboard, the low pad continuing, one gentle whoosh as the cards lift.

VOICEOVER — 0:17.5 → 0:22.5

«От бесплатного аудита — до системы, которая работает сама.»

TRANSLATIONS

EN: “From a free assessment to a system that runs itself.” · UZ: “Bepul auditdan — o'zi ishlaydigan tizimgacha.”

DELIVERY NOTE

This is the offer, spoken like a route description — «от ... до ...» with even weight on both ends. «Бесплатного» must NOT be leaned on; over-selling the free word cheapens it.

SCENE 5 · 0:24.0 – 0:30.0 · 6.0 s (two shots + loop seam)

Resolve — and the loop

SHOT 5A — THE LOOK (~3 S)

Slow push-in (digital, in post, from the 4K master — the camera itself stays locked) on the founder. He finishes something, and looks up INTO the lens. Two seconds of calm, direct eye contact. No smile-acting, no nod, no mouthing words — just the settled look of someone whose work was just shown. This is the film's only eye-contact moment; several takes, pick the calmest.

SHOT 5B — A NEW ORDER ARRIVES (~3 S)

Cut back to the Scene-1 counter framing, still quiet. On the tablet beside the dark phone, a NEW booking slides in silently and confirms itself — commerce happening with nobody lifting a finger. Hold

one beat.

THE LOOP SEAM

The final frame is compositionally the world of frame one — same counter, same light. When the video loops, the new booking hands off to the ringing phone of Scene 1: the film becomes a loop of “businesses that fixed it” vs “businesses that didn't.” Edit with a 10–15 frame crossfade at the seam as insurance; if the framings truly match, the cut can be clean.

VFX (POST)

One soft red settle on the arriving booking card. Then nothing — let the loop breathe.

SOUND (UNMUTE LAYER)

The pad resolves to a single warm note; one final soft tick for the booking; room tone out.

VOICEOVER — 0:24.0 → 0:29.5

«Меньше хаоса. Меньше ручного труда. Больше времени на рост. Freshman Consulting — чтобы вы занимались делом.»

TRANSLATIONS

EN: “Less chaos. Less manual work. More time to grow. Freshman Consulting — so you can run your business.” · UZ: “Kamroq tartibsizlik. Kamroq qo'l mehnati. O'sish uchun ko'proq vaqt. Freshman Consulting — siz o'z ishingiz bilan shug'ullanishingiz uchun.”

DELIVERY NOTE

The triad «Меньше... Меньше... Больше...» in strict parallel rhythm — this is the film's “outthink, outpace, outperform.” Micro-pause. Then the sign-off, warm and final: brand name, dash, promise. The last word lands as the booking card settles on screen.

The complete voiceover script (Russian)

Total ≈ 55 words ≈ 28–30 seconds at a calm pace. Record with the Lark M2 at 48 kHz / 24-bit in a quiet, soft-furnished room. Male or female voice, 25–40 sounding, neutral RU accent. Direction for the whole read: a competent person explaining something obvious to a peer — never a announcer, never a seller.

0:01.5

«Раньше рутина была просто частью бизнеса.»

Routine used to just be part of running a business.

0:03.5

«Теперь её можно снять с плеч.»

Now you can take it off your shoulders.

0:05.5

«Мы находим, где ваши процессы теряют время и деньги.»

We find where your processes lose time and money.

0:09.5

«И строим системы, которые закрывают утечки: автоматизация, интеграции, AI — там, где он окупается.»

And we build systems that close the leaks: automation, integrations, AI — where it pays for itself.

0:17.5

«От бесплатного аудита — до системы, которая работает сама.»

From a free assessment to a system that runs itself.

0:24.0

«Меньше хаоса. Меньше ручного труда. Больше времени на рост.»

Less chaos. Less manual work. More time to grow.

0:27.5

«Freshman Consulting — чтобы вы занимались делом.»

Freshman Consulting — so you can run your business.

SUBTITLES

Ship three WebVTT files — hero.ru.vtt, hero.en.vtt, hero.uz.vtt — cue times matching the voiceover timings above. The site renders them; nothing is burned into the picture. The Uzbek subtitle lines are given per scene in this script.

MUSIC & SOUND LICENSE

Minimal, warm, textural: room tone, soft UI ticks, one low pad from Scene 3 that resolves in Scene 5. License a track from Artlist / Epidemic Sound / Uppbeat — no trending tracks, nothing epic. Mix the voiceover –14 LUFs integrated; the master keeps its audio track (the site's sound button just unmutes it).

Production appendix

SHOOTING ORDER (ONE DAY, ~6 HOURS)

Block 1 — the counter (Scenes 1, 3A, 5B) · ~1.5 h. One location, one framing, three states: ringing chaos, calm confirmation, the new order. Shoot all three back-to-back without moving the tripod — the match-cut depends on it.

Block 2 — the paperwork set (Shots 2A, 2B, 3B) · ~1.5 h. Ledger close-up, sticky wall, cleared wall. Re-dress the same wall for before/after; tape marks before removing a single note. Also capture the 8–10 stop-motion stills of a shrinking paper stack (optional insert / social cut material).

Block 3 — the desk (Shots 2C, 3C) · ~1 h. Same over-the-shoulder framing, evening state then morning state. Practical trick: shoot the “evening” version with blinds closed and a warm practical lamp; “morning” with daylight.

Block 4 — the founder set (Shots 4A, 4B, 5A) · ~2 h. Backdrop, COB key 45° above eye level, wall-bounce fill, RGB rim at #E5484D (R229 G72 B77). Founder works, over-shoulder proof, then the look-up takes — do the look-up LAST, when he's genuinely tired of takes; the fatigue reads as calm.

SCREEN RECORDINGS (NO CAMERA, ANY TIME)

Booking-bot full conversation flow (iPhone QuickTime mirror, native resolution) · exam-grading pipeline run · both delivered RAW to post, no device frames, no cropping. Post owns final screen content.

DELIVERABLES CHECKLIST

☐ 30.0 s master, 4K 25 fps, graded, with voiceover + music audio track · ☐ 1080p H.264 web encode (CRF 23–24, yuv420p, faststart, ≤ 7 MB) → public/hero.mp4 · ☐ poster frame (the Scene-3A calm counter or Scene-4A founder frame), ≤ 200 KB JPEG → public/hero-poster.jpg — this frame must work as a standalone static hero: iOS Low-Power-Mode visitors see ONLY this · ☐ hero.ru.vtt / hero.en.vtt / hero.uz.vtt · ☐ 9:16 vertical re-cut from the 4K master for Telegram / Instagram · ☐ raw screen captures + all clean plates, archived for post.

PRE-SHOOT BLOCKERS

Location consent (if shooting at Bilol's shop — frame it neutral, no barber identity in hero shots) · prop paperwork written by you/friends, never real client or student documents · final RU/UZ/EN headline copy confirmed (sizes the calm bottom-left zone) · 5-second flicker test at each location · gaffer tape for tripod marks · RGB light preset saved at #E5484D.

BANNED IMAGERY (FROM THE RESEARCH, NON-NEGOTIABLE)

Slow-motion handshakes · city skyline timelapses · stock “productive typing” · glowing AI brains · code rain · robots · buzzword title cards · luxury signifiers of any kind. Replacement rule: only real places, real papers, real screens, real founder.
